## Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Trade Information Unit  
External Trade Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-6305) or to the Statistics Canada reference centre in:

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7.

## Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinaire et le système d'extraction de Statistique Canada.

- A. **Sources of Statistics:** Canada's external trade statistics are tabulated from copies of administrative documents collected by Revenue Canada, Customs at its ports across Canada. The Customs Act requires that each time goods are imported into or exported from Canada a document be filed with Customs giving such descriptions of the goods and details of the transaction as are required for the purposes of Customs administration. It follows that the method of compilation of external trade statistics is determined and limited to some extent by Customs regulations and procedures. Where these affect the precise or consistent application of the statistical principles explained in the following section, their impact is described in qualitative terms only.

Statistics on trade of electricity and on exports of crude petroleum and natural gas cannot for administrative reasons, be obtained from Customs documents. They are instead collected by the Manufacturing and Primary Industries Division of Statistics Canada.

Effective January 1, 1982, the 10 per cent systematic sample of low-valued import documents from the United States, as applied since January 1969 and revised in January 1975, has been discontinued. Presently, all shipments exceeding \$500 are processed and compiled by complete count, while the value of shipments below \$500 is estimated.

- B. **Concepts and Definitions Used in the Compilation of External Trade Statistics:** The most comprehensive set of principles for the compilation of trade statistics is to be found in *International Trade Statistics: Concepts and Definitions*, published by the United Nations Statistical Office (Series M, No. 52; New York, 1970). The following notes are both a summary of these principles and a description of the choices and exceptions made in the case of Canada's external trade statistics.

1. **System of Trade:** Canadian statistics are tabulated according to the "general" system of trade. Thus *imports* include all goods which have crossed Canada's geographical boundary, whether they are entered through Customs for immediate consumption in Canada or stored in bonded Customs warehouses. *Domestic exports* include goods grown, extracted or manufactured in Canada (including goods of foreign origin which have been materially transformed in Canada). *Re-exports* are exports of goods of foreign origin which have not been materially transformed in Canada (including goods withdrawn for export from bonded Customs warehouses).

The trade statistics do not include exports to Canadian diplomatic or military posts abroad nor imports by foreign diplomatic or military posts in Canada because such posts are considered to be within the geographical boundary of the sponsor country. Purchases or sales of bunker supplies and stores for ships or aircraft engaged in international traffic, tourist purchases and settlers' effects are excluded for practical reasons. Goods which cross the Canadian border for convenience of transportation only are not included in trade statistics.

2. **Coverage:** Merchandise trade includes only goods which add to or subtract from the stock of material resources in Canada as a result of their movement across the Canadian border. Consequently, goods intended to be returned to the exporting country after a short period of time are excluded from trade statistics (when this intention is apparent from the Customs documentation). Examples of such transactions are works of art loaned for exhibition, vehicles or horses exported to compete in races, and films exported for processing and return. Goods exported or imported for purposes of repair only are excluded from statistics, although payments or receipts for repairs are included in the trade statistics. Financial assets such as circulating coin, stocks and bonds are also excluded from the trade statistics.

- A. **Sources des statistiques:** Les statistiques sur le commerce extérieur du Canada sont totalisées à partir des copies des documents administratifs recueillis par Revenu Canada (Douanes) dans ses bureaux de douane par tout le Canada. La Loi sur les douanes exige que chaque fois que des marchandises sont importées au Canada ou exportées du pays, une déclaration soit faite précisant la nature des marchandises et donnant le détail de l'opération commerciale d'après les besoins de la réglementation de l'administration douanière. Il s'ensuit que la méthode de production de statistiques sur le commerce extérieur est déterminée et limitée dans une certaine mesure par les règlements et les procédures des douanes. Lorsque ceux-ci nuisent à l'application précise ou uniforme des principes statistiques exposés dans la section suivante, leur incidence est décrite en termes qualitatifs seulement.

Des statistiques sur le commerce de l'énergie électrique et sur les exportations de pétrole brut et de gaz naturel ne peuvent, pour des raisons administratives, être tirées des documents de douane. Elles sont plutôt recueillies par la Division des industries manufacturières et primaires de Statistique Canada.

À partir du 1er janvier 1982, l'échantillonnage systématique du 10 p. 100 du montant des marchandises de faible valeur importés des États-Unis, tel qu'appliqué depuis janvier 1969 et révisé en janvier 1975, a été discontinué. Présentement, pour toutes les livraisons dont la valeur excède \$500, le traitement et le calcul sont exhaustifs, alors que la valeur des livraisons inférieures à \$500 est estimée.

- B. **Concepts et définitions utilisés dans la production de statistiques sur le commerce extérieur:** L'ensemble le plus complet de principes directeurs pour la préparation de ces statistiques est présenté dans *Statistiques du commerce international: concepts et définitions*, publié par le Bureau de statistique des Nations Unies (série M, no 52, New York, 1970). Les notes suivantes résument ces principes et décrivent les choix et les exceptions dans le cas de la statistique du commerce extérieur du Canada.

1. **Système commercial:** Les statistiques canadiennes sont totalisées selon le système commercial "général". Ainsi, les *importations* comprennent tous les biens qui ont franchi les limites géographiques du Canada, qu'ils soient passés par les douanes pour être consommés immédiatement au Canada ou qu'ils aient été entreposés en douane. Les *exportations nationales* comprennent les biens cultivés, extraits ou fabriqués au Canada (y compris les biens d'origine étrangère qui ont été transformés au Canada). Les *réexportations* sont des exportations de biens d'origine étrangère qui n'ont pas été transformés matériellement au Canada (y compris les biens retirés des entrepôts de douane en vue de leur exportation).

La statistique du commerce ne prend pas en compte les exportations vers des missions diplomatiques ou militaires canadiennes à l'étranger ni les importations attribuables à des missions étrangères semblables au Canada, car on considère que ces missions ne se trouvent pas hors des limites géographiques du pays qui les a envoyées. Les achats ou les ventes d'approvisionnement de navires ou d'aéronefs affectés au transport international, les achats des touristes et les effets des migrants sont exclus pour des raisons pratiques. Les biens auxquels on fait franchir la frontière canadienne uniquement pour en faciliter le transport sont laissés hors compte.

2. **Champ d'observation:** Le commerce de marchandises ne comprend que les biens dont le passage d'un côté à l'autre de la frontière canadienne augmente ou diminue le stock de ressources matérielles du Canada. Ainsi, les biens qui seront renvoyés dans le pays exportateur après un court laps de temps sont exclus de la statistique du commerce (lorsque cette intention se dégage des documents de douane). Citons à titre d'exemple les œuvres d'art prêtées pour une exposition, les véhicules ou les chevaux exportés en vue d'une course, les films exportés pour être développés, puis retournés. Les biens exportés ou importés pour fins de réparation seulement ne sont pas pris en compte, bien que les paiements ou les recettes au titre des réparations soient portés dans la statistique du commerce. Des avoirs financiers comme le numéraire non périmé, les actions et les obligations sont également laissés hors compte.

3. **Valuation:** Imports are generally recorded at the values established for Customs duty purposes according to the provisions of the Customs Act. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. (Beginning in 1970, imports of automotive products from the United States have been recorded at company transfer prices rather than Customs values.) Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

4. **Trading Partner Attribution:** Imports are attributed to the country from which the goods were first consigned directly to Canada, whether or not this is the country of origin. An exception is made in the case of goods of Central or South American origin consigned to Canada from the United States; such imports are credited to the country of origin, except for "Swap Oil" from the United States which are credited to this country.

5. **Commodity Classification:** Commodity statistics in this report are shown in terms of the 1978 edition of the *Canadian International Trade Classification* (C.I.T.C.) Reference Manual (Cat. no. 65-502E) which replaces the 1972 edition (Cat. no. 12-544E).

The C.I.T.C. is an expanded version of the 5-digit import commodity classification (M.C.C.) used in other publications of trade statistics. The C.I.T.C. contains some 16,000 commodity classes compared with some 2,700 classes in the M.C.C. Statistics have been captured and edited at this level of detail since January, 1976 only, and consequently, earlier import statistics are available at M.C.C. level only. In this publication the data is presented in M.C.C. by C.I.T.C. sequence.

The symbol "x" indicates suppression of statistics to prevent disclosure, while the symbol "-" indicates either a zero amount or an amount too small to be expressed.

6. **Quantities:** Quantities, where available, are published in imperial and equivalent metric units of measure. These units and their conversion factors are listed on pages vii and viii of this report. Measures of weight or volume generally exclude any packing required for shipment and "numbers" refer to complete (or substantially complete) units imported, excluding parts. At the M.C.C. level, the imperial units of measure shown in this publication are usually identical to the units published in other External Trade publications (Cat. no. 65-007 and 65-203).

7. **Abbreviations:** Designations of countries and commodities used in this report are often abbreviated or shortened. A key to abbreviations of countries appears on page X of this report. The letters "n.e.s." mean "not elsewhere specified".

3. **Évaluation:** Les importations sont habituellement présentées selon les valeurs établies aux fins du prélèvement des droits de douane conformément aux dispositions de la Loi sur les douanes. Les valeurs des douanes sont identiques aux prix de vente dans le cas de la plupart des opérations entre parties indépendantes. Toutefois, les valeurs douanières dépassent les prix de transfert des sociétés dans le cas de la majorité des opérations entre entreprises affiliées. (À partir de 1970, les importations de produits de l'industrie automobile en provenance des États-Unis sont indiquées aux prix de transfert et non pas selon les valeurs fixées en douane.) Les valeurs déclarées dans les documents d'importation ne doivent pas comprendre les frais de transport. Certaines importations en provenance des États-Unis sont toutefois sur une base de livraison et leur prix englobe par conséquent les frais de transport.

4. **Partenaires commerciaux et attribution:** Les importations sont attribuées au pays de première consignation directe des biens au Canada, que ce soit ou non le pays d'origine. On déroge à cette règle dans le cas des biens ayant comme région d'origine l'Amérique centrale ou l'Amérique du Sud et expédiés au Canada depuis les États-Unis; ces importations sont portées au crédit du pays d'origine, sauf pour les échanges de pétrole brut avec les États-Unis qui sont crédités à ce pays.

5. **Classification des marchandises:** Dans ce bulletin, les statistiques sur les marchandises sont présentées d'après l'édition de 1978 du manuel de référence intitulé *La nomenclature canadienne pour le commerce international des marchandises* (N.C.C.I.), (no 65-502F au catalogue), qui remplace l'édition de 1972 (no 12-544F au catalogue).

Cette classification présente une ventilation plus poussée de la classification à cinq chiffres pour les marchandises d'importation (C.M.I.) utilisée dans d'autres publications statistiques sur le commerce. La N.C.C.I. comprend quelques 16,000 catégories de marchandises, contre environ 2,700 dans la C.M.I.. Les statistiques sont saisies et contrôlées à ce niveau de finesse depuis janvier 1976 seulement; les statistiques antérieures sur les importations ne sont donc disponibles qu'au niveau de finesse de la C.M.I.. Les données dans cette publication sont présentées en séquence de C.M.I. par N.C.C.I..

Le symbole "x" indique que les statistiques ont été supprimées pour empêcher la divulgation de données confidentielles, tandis que le symbole "-" signifie que le nombre est 0 ou est trop faible pour être exprimé.

6. **Quantités:** Les quantités disponibles sont publiées en unités métriques et impériales. Ces unités et leurs facteurs de conversion sont énumérés aux pages vii et viii de la présente publication. Les poids et volumes ne tiennent généralement pas compte de l'emballage nécessaire à l'expédition et les "nombres" concernent des unités complètes (ou essentiellement complètes), à l'exception des pièces. Au niveau de la C.M.I., les unités de mesure impériales que renferme cette publication sont habituellement identiques aux unités contenues dans les autres publications sur le commerce extérieur (nos 65-007 et 65-203 au catalogue).

7. **Abréviations:** Les noms de pays et de marchandises cités dans la présente publication sont souvent abrégés ou raccourcis. L'explication des abréviations des pays figure à la page XI du présent rapport. Les lettres "n.d.a." signifient "non dénommé ailleurs".

## TABLEAU DE CONCORDANCE: N.C.C.I. AU C.M.I.

Generally the first 5 digits of the 7 digit C.I.T.C. code correspond to the 5 digit Import Commodity Classification code. The following table shows a list of the instances where this is not the case. En règle générale les 5 premiers chiffres du code de 7 chiffres de la N.C.C.I. correspondent au code de 5 chiffres de la Classification des Importations. Le tableau qui suit donne une liste des exceptions à cette règle.
